

ROTINGER brake pads

3 YEARS
GUARANTEE

Designed with safety and durability in mind, they guarantee braking performance in all conditions.

ROTINGER brake pads are manufactured by ROLUNDS BRAKING, a leading global manufacturer of high-quality friction materials for the automotive industry. A series of rigorous tests carried out on test tracks in Europe by the manufacturer guarantee the ROTINGER pads the highest braking performance while maintaining a long service life.

ROTINGER brake disc

OUR INNOVATIONS in BRAKE SYSTEMS

Slotting is one of the most important elements that allows you to clean the glassy surface of the pad during overheating, remove dust, water, dirt and serve as an indicator of wear of the brake disc.

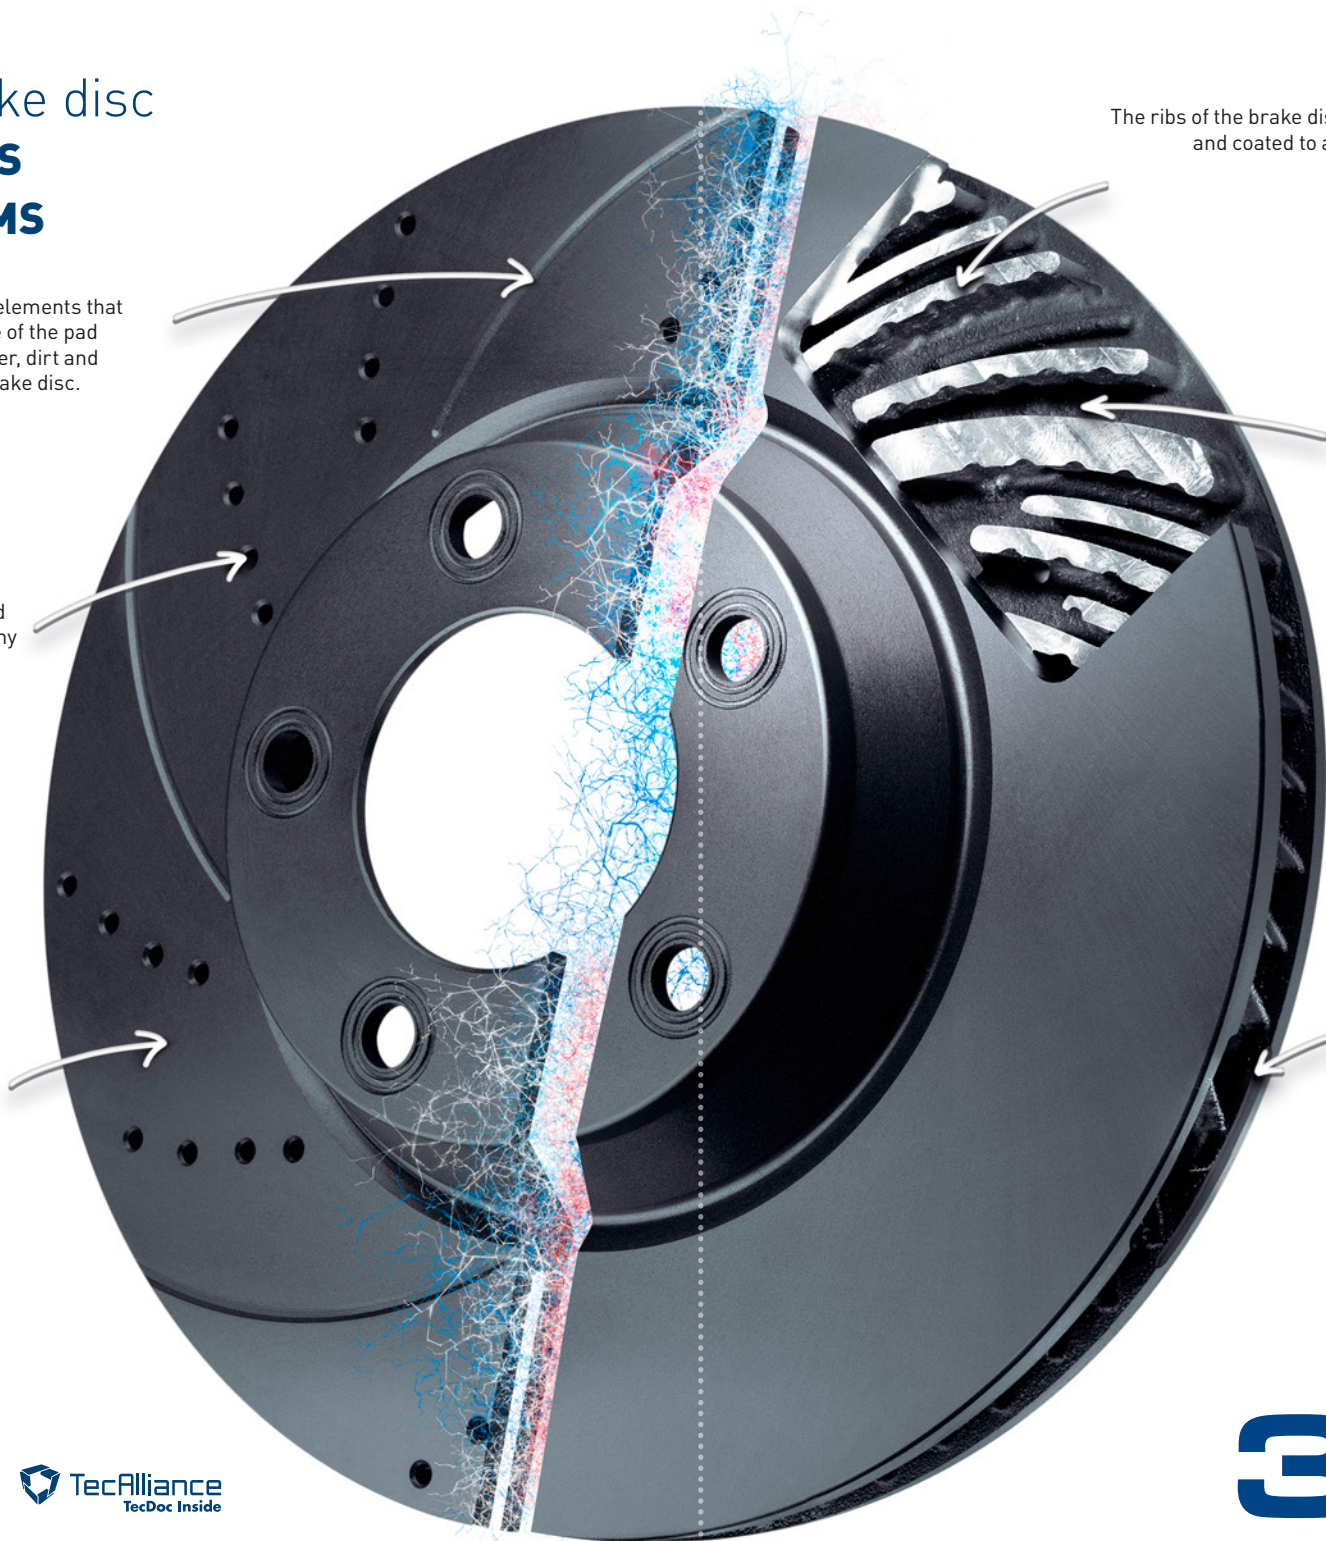

The perforation is designed for rapid cooling by quickly removing gases and is already a necessary element in many cars as a regular element of tuning.

HP (High Performance) is a special composition of GG15HC (high carbon) and increased carbon content allow you to withstand higher temperatures of overheating.

The ribs of the brake disc are the key and were reinforced and coated to achieve maximum ventilation up to 135 thousand miles.

GL (Graphite Line) is an innovative anti-corrosion coating that covers all surfaces (external and internal) of the brake disc - up to 168 hours resistance in salt spray test according to ASTM B-117 Standards).

Balancing is a priority for Rotinger brakes, which provides additional guarantees that there is no runout at high speeds.
